Visit perfd.com for more information.

PFERD carbide burs and bi-metal hole saws are developed, manufactured and tested in accordance with the strictest quality requirements. Research and development, our in-house and plant construction, and the continuous testing to quality and safety standards in our internal laboratories all guarantee high PFERD quality.

PFERD quality management is certified according to ISO 9001.

Technical customer support

PFERD offers individual targeted support to solve unique application problems. Our experienced sales representatives and technical applications specialists are available to assist you.

Contact your local sales representative or visit us at pferd.com to learn more.

Packaging

PFERD carbide burs and bi-metal hole saws are packaged to provide optimum protection. All burs are supplied individually packed in a sturdy plastic box. Bi-metal hole saws are supplied in a practical card box. Packaging can also be easily displayed on **PFERD**TOOL-CENTER units. The packaging labels feature easy identification of product features and part number.

PFERDTOOL-CENTER

The **PFERD**TOOL-CENTER is a premium display system that can be custom-designed to meet your specific product and presentation requirements, including lockable cases specially designed for displaying carbide burs. For more information from a PFERD expert, contact us today at pferd.com.

PFERDVALUE® – Your added value with PFERD

Results from the PFERD test laboratories as well as from the product tests by independent testing institutes prove: PFERD products offer measurable added value.

Discover **PFERDERGONOMICS**® and **PFERDEFFICIENCY**®:

As part of **PFERDERGONOMICS**®, PFERD offers ergonomically optimized products and power tools that contribute to greater safety and working comfort, and thus to health protection.

As part of **PFERDEFFICIENCY**®, PFERD offers innovative, high-performance solutions with outstanding added value.

For more information please refer to our brochure "**PFERD**VALUE® – Your added value with PFERD".

Carbide burs and bi-metal hole saws

Quick product selection guide

| Application | Material group | | | Application | High-performance line | P. | Performance line | P. | Universal line | P. |
|--|--|---|---|----------------------|-----------------------|----------|------------------|------------|----------------|----|
| Deburring, chamfering, milling out for the preparation of build-up welding, machining weld seams, machining contours, cleaning cast material | Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | Coarse stock removal | STEEL cut | 38 | OMNI cut | 29 | Double cut | 14 |
| | | | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | |
| | | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | Coarse stock removal | STEEL cut | 38 | OMNI cut | 29 | Double cut | |
| | | | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | |
| | Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Coarse stock removal | INOX cut | 43 | OMNI cut | 29 | Diamond cut | 14 |
| | | | | Fine stock removal | MICRO cut | 65 | - | - | - | |
| | Non-ferrous metals | Soft non-ferrous metals | Aluminum alloys | Coarse stock removal | ALU cut | 48 | - | - | Single cut | 14 |
| | | | | Fine stock removal | ALU cut | 48 | OMNI cut | 29 | Single cut | |
| | | | Brass, copper, zinc | Coarse stock removal | ALU cut | 48 | OMNI cut | 29 | Diamond cut | |
| | | | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | |
| | | Hard non-ferrous metals | Bronze, titanium/titanium alloys, hard aluminum alloys (high Si content) | Coarse stock removal | ALU cut | 48 | OMNI cut | 29 | Diamond cut | |
| | | | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | |
| | | | | Coarse stock removal | On request | - | - | - | Diamond cut | |
| | | | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | |
| High-temperature-resistant materials | Nickel-based and cobalt-based alloys (engine and turbine construction) | Coarse stock removal | On request | - | - | - | Diamond cut | | | |
| | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | | | |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | Coarse stock removal | CAST cut | 55 | OMNI cut | 29 | Double cut | 14 | |
| | | | Fine stock removal | MICRO cut | 65 | - | - | Single cut | | |
| Trimming, contour milling, cutting out holes | Plastics, other materials | Thermoplastics, fibre-reinforced plastics (GRP/CRP) with a fibre content > 40 % | Coarse stock removal | ALU cut | 48 | - | - | - | - | |

Special applications

| Application | High-performance/performance line | Page | Universal line | Page |
|--|-----------------------------------|------|--------------------|------|
| Work on edges | Carbide burs for work on edges | 69 | - | - |
| Applications resulting in broken teeth | Carbide burs – TOUGH cut | 59 | - | - |
| Cutting out round holes | - | - | Bi-metal hole saws | 73 |

Extended shank burs

Tungsten carbide extended shank burs are particularly well suited to working in hard-to-reach areas. PFERD offers long-shank versions for the respective product groups.

Long-shank versions are available with the Double, OMNI, STEEL and TOUGH cuts. All extended shanks can be individually shortened, and additional versions can be custom-made on request.

Please observe the safety regulations for extended shank burs on page 11.

HICOAT® coatings

PFERD offers carbide burs with HICOAT® coatings to tackle particularly demanding applications. The anti-wear coatings enable effective chip removal due to the improved anti-adhesion characteristics and increase in the product's service life. Two different coatings are available. The HICOAT® coating HC-FEP is specifically designed for iron and steel materials. The HICOAT® coating HC-NFE is mainly used for long-chipping and lubricating aluminum alloys and non-ferrous metals.

Automated applications

PFERD milling tools can be used on automated machines such as robots and CNC machines. The optimum burr for your application depends on the process requirements.

Our sales representatives and technical applications specialists will be happy to assist you in selecting the most suitable burr.

PFERDPRAXIS brochures

Our PFERDPRAXIS brochures contain a wealth of useful information on material properties as well as tips and tricks for using PFERD products on specific materials or for specific applications.

Carbide burs

PFERD cuts and their application

PFERD cuts for universal applications

Single cut

- Machining of steel, cast iron, stainless steel (INOX), nickel-based alloys and titanium alloys.
- High stock removal.
- Good surface finish.

Double cut

- Similar to single cut, but with cross cut.
- Machining of steel, cast iron, stainless steel (INOX), nickel-based alloys and titanium alloys.
- High stock removal.

Diamond cut

- Machining of stainless steel (INOX), steel and high-temperature-resistant materials such as nickel-based and cobalt-based alloys.
- High stock removal with short chips.
- Good surface finish.

PFERD cuts for performance applications

OMNI cut

- High stock removal rate on key materials such as steel, cast steel, stainless steel (INOX), non-ferrous metals and cast iron.
- Similar to the double cut but with a significantly higher stock removal rate.

PFERD cuts for high-performance applications

STEEL cut

- Extremely high stock removal rate on steel and cast steel.
- Smooth milling.
- Reduced vibration and less noise.

INOX cut

- Extremely high stock removal rate on all austenitic, rust and acid-resistant steels, stainless steel (INOX) and soft titanium alloys.
- Significantly reduced vibration and less noise.

ALU cut

- High stock removal rate on aluminum and aluminum alloys, non-ferrous metals and plastics.
- Smooth milling.

CAST cut

- Extremely high stock removal rate on cast iron.
- Smooth milling.
- Reduced vibration and less noise.

EDGE cut

- Creates exact edge shapes – with either 30° or 45° chamfering or a defined radius of 1/8".
- Safe and comfortable to guide.

TOUGH cut

- High stock removal rate on cast iron, steel up to 580 HV (54 HRC).
- Extremely resistant to impacts.
- Suitable for use with high surface contact angles > 1/3 and under impact loads.

MICRO cut

- Good stock removal on almost all materials up to 940 HV (68 HRC).
- High surface quality.
- Reduced vibration and less noise.

HICOAT® coatings

- PFERD carbide burs are also available with HICOAT® coatings.
- Improved anti-adhesion characteristics.
- Effective chip discharge.
- Lower thermal loads.
- Increased service life.
- Also suitable for use at higher peripheral speeds when compared with uncoated burs.

If you cannot find the solution for your particular application in our extensive catalogue range, we can produce carbide burs to meet your requirements in premium PFERD quality specifically for your application upon request.

Contact your local sales representatives who will be happy to assist you.

As a tool manufacturer with over 200 years of experience, PFERD can call on comprehensive expertise in the manufacture of metalworking solutions. The findings from our internal research and development, as well as from day-to-day practice on site with our customers, contribute to the development of each individual PFERD product. Our production plant in Marienheide, Germany, works with state-of-the-art technology and there are many ways in which we can respond to individual needs.

2

1. We analyze your application.

We will discuss and analyze your application on-site and develop the most economic solution for your specific application.

Contact us for details and to set up an appointment.

2. We develop the solution.

This is based on your needs, application requirements and other criteria. From inspection of raw materials, to the inspection of the final product itself – PFERD always works to the highest quality standards.

The quality of PFERD products is certified according to ISO 9001.

3. Your product is ready for use!

Our flexible production and global logistics network ensure your custom product is delivered on-time and within your budget.

See the quality, performance and economic value of PFERD products for yourself!

Carbide burs

Recommendations for use and instances of misuse

Recommendations for use:

An optimum rotational speed and power output for the power tool (air-powered or electric grinders, flexible shaft drive) is required for cost-effective use of carbide burs.

- If possible, mount burs on high-powered drives with elastically mounted spindles to avoid vibration.
- For cost-effective use of burs with a shank diameter > 1/4", a power tool output of 300–500 watts is required when used at a higher rotational speed and peripheral speed.
- Use the highest rotational speed possible within the recommended rotational speed and peripheral speed ranges.
- For applications with low stock removal (deburring, chamfering, minor work on surfaces), the rotational speed can be increased by up to 100% (this excludes extended shank burs).

- Use only rigid clamping systems and power tools as impacts on the burs and bur chatter lead to premature wear.

1/3 of the total surface

- The bur surface in contact with the workpiece must not exceed 1/3 of the total bur surface. Failure to comply with this recommendation will result in rough milling behaviour and possibly in broken teeth. If this cannot be avoided, we recommend using the TOUGH cut.

In direction of rotation
= fine finish

- In general, burs are used counterrotationally or with a swinging motion. To achieve finer finishes, pass the bur rapidly over the workpiece in the direction of rotation.

Safety notes:

= Wear eye protection!

= Wear hearing protection!

Wearing protective gloves is recommended. Handle the power tool with both hands.

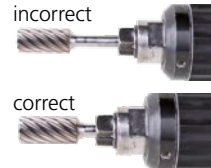

Observe the recommended rotational speed, especially when using extended shank burs!

= Read the Safety Data Sheets (SDS) before using any materials!

Avoiding misuse

| Figure | Consequences of misuse | Solution |
|--|--|---|
|  | The bur becomes clogged during use. | Use the correct cut for the material being machined. Use tools with a HICOAT® coating or use grinding oil. |
|  | Pronounced discoloration can be seen in the transition between the toothed section and the shank.* | Observe the recommended rotational speeds and/or reduce the contact pressure and surface contact angle. |
|  | The head detaches from the shank. | |
|  | There are flying sparks. | Reduce the rotational speed and contact pressure and make sure that the surface contact angle is no more than 1/3 of the bur surface. |
|  | Bur head shows severe chipping or splintering. | Avoid impact loads when using the bur. |

| Figure | Consequences of misuse | Solution |
|---|--|--|
|  | The shank breaks. | Only use rigid power tools and undamaged clamping systems, and replace them if necessary. |
|  | The clamping length is incorrect. | Do not choose a bur clamping depth that is too short. In general , the minimum clamping depth is 2/3 of the shank length (does not apply to extended shank burs). |
|  | The shank bends on extended shank burs. | Observe the recommended rotational speeds and safety notes for extended shank burs. |
|  | Signs of wear such as rough running and strong vibrations occur, as well as increased flying sparks. | Do not use burs beyond the end of their service life. Use a new bur instead. |

* On burs designed for high-performance applications, blue discoloration is extremely difficult to avoid on account of the very high stock removal rate. However, this does not constitute a safety risk.

Extended shank burs are ideal for cost-effectively machining small, hard-to-reach areas on components. Long-shank versions are available with the Double, OMNI, STEEL and TOUGH cut burs.

Extended shank burs can be shortened if required.

SL = shank length (long steel shank)

Safety notes:

Not suitable for robotic or stationary applications. **Risk of bending.** Use only rigid clamping systems/power tools.

= Observe the prescribed rotational speed!

Safety note – maximum rotational speed [RPM] for extended shank burs

When working with extended shank burs, it is critical that the burr is in contact with the workpiece (or inserted in the bore or slot to be machined) before the power tool is turned on. As a rule, the burr must remain in contact with the workpiece for as long as the machine is running. Failure to observe this procedure may result in shank failure (bending) and hence an increased risk of accidents. If continuous contact between the burr and the workpiece is not guaranteed, the **3** maximum idling speeds stated in the table must not be exceeded.

For safety reasons, the maximum application speeds **2** with contact with the workpiece require a reduction in the recommended speed of carbide burs with standard shanks. The reduced speeds are stated in the table below.

Example

Carbide burr, L6, double cut, bur diameter: 1/2".
 Coarse stock removal on steels up to 370 HV.

Recommended reduced speed with workpiece contact: 7,000 RPM

To determine the recommended rotational speed range [RPM], please proceed as follows:

- 1** Select the required bur diameter.
- 2** For the maximum application speed [RPM] with contact with the workpiece, please refer to the right-hand side of the table.

| 1 Bur dia. [Inches] | 3 Maximum rotational free speed [RPM] (No contact to the workpiece) | 2 Recommended reduced rotational application speed [RPM] (With contact to the workpiece) |
|----------------------------------|---|--|
| | Shank length [Inches] | |
| | L6 (6") | L6 (6") |
| 1/4 | 8,000 | 15,000 |
| 5/16 | 6,000 | 11,000 |
| 3/8 | 4,000 | 9,000 |
| 1/2 | 3,000 | 7,000 |

Extensions for spindles

In some applications, spindle extensions are an economic alternative to customized extended shank burs. For more information please see page 12.

Carbide burs

Spindle extensions

Burs (shank dia. 1/8, 1/4 and 3/8 inch) can be extended with spindle extensions. They allow access to hard-to-reach areas. The drive spindle extension is mounted in the collet of the power tool (air-powered or electric), or in the handpiece of the flexible shaft drive. In some applications, spindle extensions are an economical alternative to customized extended shank burs.

Safety notes:

- For safety reasons, it is not possible to use spindle extensions in combination with extended-shank burs.
- For additional safety notes, please refer to catalogue section 9.

More detailed information and ordering information for spindle extensions can be found in catalogue section 9.

= Read the safety notes!

Carbide burs, universal line

For fine and coarse stock removal

Universal line burs are suitable for fine and coarse stock removal on the key materials used in industrial manufacturing. They provide a good stock removal rate and are not specific to a particular material.

Advantages:

- Good stock removal rate through optimum matching of tungsten carbide, geometry, cut and available coating.
- Long service life.
- Reduced wear on the power tool due to impact-free work without chatter marks, due to the high concentricity.
- High surface quality.

Workpiece materials:

- Steel, cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron

Applications:

- Milling out
- Leveling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Recommendations for use:

- If possible, use the burs on powerful tools with elastically mounted spindles to avoid vibration.
- For the cost-effective use of burs, work with higher rotational/peripheral speeds.
 Power recommendation for power tools:
 - Shank diameter of 1/8": 75 to 300 watts
 - Shank diameter of 1/4": from 300 watts
- Please observe the rotational speed recommendations.

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

PFERDVALUE®:

PFERDEFFICIENCY® recommends burs with HICOAT® coating for long fatigue-free and resource-saving work with perfect results in a very short period of time.

Waste Saving

Time Saving

Single cut

- Machining of cast iron, steel, stainless steel (INOX), nickel-based alloys and titanium alloys.
- High stock removal.
- Good surface.

Diamond cut

- Machining of stainless steel (INOX), steel and high-temperature-resistant materials such as nickel-based and cobalt-based alloys.
- High stock removal with short chips.
- Good surface.

Double cut

- Similar to Single cut, but with cross cut.
- Machining of cast iron, steel, stainless steel (INOX), nickel-based alloys and titanium alloys.
- High stock removal.

HICOAT® coating HC-FEP for iron and steel materials

- High hardness and wear resistance.
- Effective chip removal through improved anti-adhesion characteristics.
- Very high resistance against thermal load.
- Increased service life.
- Also suitable for use at higher peripheral speeds when compared with uncoated burs.

Recommended rotational speed range [RPM]

To determine the recommended peripheral speed range [SFPM], please proceed as follows:

- 1 Select the material group to be machined.
- 2 Determine the type of application.
- 3 Select the cut.
- 4 Establish the peripheral speed range.

To determine the recommended rotational speed range [RPM], please proceed as follows:

- 5 Select the required bur diameter.
- 6 The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| 1 Material group | | 2 Application | 3 Cut | 4 Peripheral speed | |
|------------------------|--|---|----------------------|---|--|
| Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | Coarse stock removal | Double cut HICOAT® HC-FEP | 2,000 - 3,000 SFPM 1,500 - 2,500 SFPM |
| | | | Fine stock removal | Single cut | 1,500 - 2,000 SFPM |
| | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | Coarse stock removal | Single cut Double cut Diamond cut HICOAT® HC-FEP | 850 - 1,150 SFPM 850 - 1,500 SFPM |
| | | | Fine stock removal | Single cut | 1,150 - 1,500 SFPM |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Coarse stock removal | Single cut Double cut Diamond cut | 1,150 - 1,500 SFPM 850 - 1,150 SFPM |
| | | | Fine stock removal | Single cut | 1,150 - 1,500 SFPM |
| Non-ferrous metals | Soft non-ferrous metals | Aluminum alloys, brass, copper, zinc | Coarse stock removal | Single cut | 2,000 - 3,000 SFPM |
| | | | Fine stock removal | Single cut | 1,150 - 1,500 SFPM |
| | Hard non-ferrous metals | Bronze, titanium/titanium alloys, hard aluminum alloys (high Si content) | Coarse stock removal | Single cut Diamond cut | 850 - 1,150 SFPM |
| | | | Fine stock removal | Single cut | 1,150 - 1,500 SFPM |
| | High-temperature-resistant materials | Nickel-based and cobalt-based alloys (engine and turbine construction) | Coarse stock removal | Double cut Diamond cut | 850 - 1,500 SFPM |
| | | | Fine stock removal | Single cut | 1,150 - 2,000 SFPM |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | Coarse stock removal | Double cut | 1,500 - 2,000 SFPM |
| | | | Fine stock removal | Single cut | |

Example:

Carbide bur, double cut, bur diameter 1/2" Coarse stock removal on steels up to 370 HV. Peripheral speed: 2,000–3,000 SFPM

Rotational speed range:
16,000–24,000 RPM

Safety note:

Please observe the reduced rotational speeds for extended shank burs. They can be found on page 11.

| 5 Bur dia. [Inches] | 6 Peripheral speed [SFPM] | | | | | |
|------------------------|---------------------------|--------|--------|--------|---------|---------|
| | 850 | 1,150 | 1,500 | 2,000 | 2,500 | 3,000 |

Carbide burs, universal line

For fine and coarse stock removal

12 piece carbide bur sets – Single cut, double cut

Contains twelve carbide burs in the shapes and dimensions most commonly used in the workshop.

The sturdy plastic box protects the burs from dirt and damage.

EDP 26525

12 piece single cut carbide bur set 1/8" shank (plastic case)

Contains 12 pcs. burs with 1/8" shank diameter and single cut.

EDP 26526

12 piece double cut carbide bur set 1/8" shank (plastic case)

Contains 12 pcs. burs with 1/8" shank diameter and double cut.

8 piece carbide bur sets – Single cut, double cut

Contains eight carbide burs in the shapes and dimensions most commonly used in the workshop.

The sturdy plastic box protects the burs from dirt and damage.

Two additional unused slots are available for other burs.

EDP 26546

8 piece single cut carbide bur set 1/4" shank (plastic case)

Contains 8 pcs. burs with 1/4" shank diameter and single cut.

EDP 26547

8 piece double cut carbide bur set 1/4" shank (plastic case)

Contains 8 pcs. burs with 1/4" shank diameter and double cut.

| Set contents shape | Bur dia. d ₁ [Inches] | Bur length l ₂ [Inches] | SCTI no. | Cut type and set EDP number | | Cut type and set EDP number | |  |

With the innovative OMNI cut, PFERD has developed unique burs for versatile use on key materials such as steel and cast steel, stainless steel (INOX), non-ferrous metals and cast iron. The OMNI cut offers all the benefits of the tried-and-tested double cut, but its stock removal rate is up to 30% higher for steel. It enables comfortable working with reduced vibration and less noise. They also offer significant time savings and a high economic value.

Advantages:

- Significantly better stock removal rate than burs with a conventional double cut.
- Saves money and time with its very high stock removal rate on key materials.
- Comfortable working with reduced vibration and less noise.

Workpiece materials:

- Steel, cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron

Performance values for applications on steel

- Conventional double cut burs
- Carbide burs, OMNI cut

Applications:

- Milling out
- Leveling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Recommendations for use:

- It is recommended to use the burs on powerful power tools with elastically mounted spindles to avoid vibration.
- For the most cost-effective use of burs, work with higher rotational/peripheral speeds. Power recommendation for power tools: from 300 watts.
- Please observe the rotational speed recommendations.

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

Safety note:

- The very high stock removal rate can cause discolouration on the shank. This does not constitute a safety risk.

PFERDVALUE®:

PFERDERGONOMICS® recommends burs with OMNI cut as an innovative bur solution for comfortable working with significantly reduced vibration and less noise.

PFERDEFFICIENCY® recommends burs with OMNI cut for long fatigue-free and resource-saving work with perfect results in a very short period of time.

Carbide burs, performance line

OMNI cut for versatile use

Recommended rotational speed range [RPM]

To determine the recommended peripheral speed range [SFPM], please proceed as follows:

- ❶ Select the material group to be machined.
- ❷ Establish the peripheral speed range.

To determine the recommended rotational speed range [RPM], please proceed as follows:

- ❸ Select the required bur diameter.
- ❹ The peripheral speed range and the bur diameter determine the recommended rotational speed range.

Safety note:

Please observe the reduced rotational speeds for extended shank burs. They can be found on page 11.

| ❶ Material group | | Application | Cut | ❷ Peripheral speed | |
|------------------------|--|---|----------------------|--------------------|--------------------|
| Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | Coarse stock removal | OMNI | 1,500 - 2,500 SFPM |
| | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | Coarse stock removal | OMNI | 850 - 1,500 SFPM |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Coarse stock removal | OMNI | 1,500 - 2,000 SFPM |
| Non-ferrous metals | Soft non-ferrous metals | Brass, copper, zinc | Coarse stock removal | OMNI | 1,500 - 2,500 SFPM |
| | Hard non-ferrous metals | Bronze, titanium/titanium alloys, hard aluminum alloys (high Si content) | Coarse stock removal | OMNI | 1,500 - 2,000 SFPM |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | Coarse stock removal | OMNI | 1,500 - 3,000 SFPM |

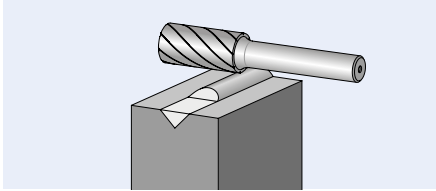

Example:

Carbide bur,
OMNI cut,
bur diameter 1/2".
Coarse stock removal on steels
up to 370 HV.
Peripheral speed: 1,500–2,500 SFPM
Rotational speed range:
12,00–20,000 RPM

| ❸ Bur dia. [Inches] | ❹ Peripheral speed [SFPM] | | | | |
|---------------------|---------------------------|--------|--------|--------|--------|

Carbide burs, high performance line

STEEL cut for steel and cast steel

With the innovative STEEL cut, PFERD has developed unique burs for working with steel and cast steel. They are characterized by significantly increased aggressiveness and good guidance, ensuring safe and precise work. The extremely high stock removal rate makes burs with the STEEL cut impressive, with significant time savings and a high economic value.

Advantages:

- Up to 50% higher stock removal rate when used on steel and cast steel in comparison to conventional double cut burs.
- Significantly increased aggressiveness, large chips and very good chip removal resulting from the innovative tooth geometry.
- Workpiece is protected through much lower thermal load.

Applications:

- Milling out
- Leveling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Safety note:

- The very high stock removal rate can cause discolouration on the shank. This does not constitute a safety risk.

PFERDVALUE®:

PFERDERGONOMICS® recommends burs with STEEL cut as an innovative product solution for comfortable working with significantly reduced vibration and less noise.

PFERDEFFICIENCY® recommends burs with STEEL cut for long fatigue-free and resource-saving work with perfect results in a very short period of time.

More PFERD products and information on working with steel can be found in our PRAXIS brochure "PFERD products for use on steel".

Workpiece materials:

- Steel
- Cast steel

Recommendations for use:

- It is recommended to use the burs on powerful power tools with elastically mounted spindles to avoid vibration.
- For the most cost-effective use of burs, work with higher rotational/peripheral speeds. Power recommendation for power tools: from 300 watts.
- Please observe the rotational speed recommendations.

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

Recommended rotational speed range [RPM]

To determine the recommended rotational speed range [RPM], please proceed as follows:

❶ Refer to the table for the peripheral speed.

- ❷ Select the required bur diameter.
- ❸ The peripheral speed range and the bur diameter determine the recommended rotational speed range.

Safety note:

Please observe the reduced rotational speeds for extended shank burs. They can be found on page 11.

| Material group | | Application | Cut | ❶ Peripheral speed |
|-------------------|--|---|----------------------|--------------------|
| Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | Coarse stock removal | STEEL |
| | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | | |

Example:

Carbide bur,
STEEL cut,
bur diameter of 1/2" .
Peripheral speed: 1,500–2,500 SFPM

**Rotational speed range:
12,000–20,000 RPM**

| ❷ Bur dia. [Inches] | ❸ Peripheral speed [SFPM] | |
|---------------------|---------------------------|--------|
| | 1,500 | 2,500 |
| | Rotational speed [RPM] | |
| 1/4 | 24,000 | 40,000 |
| 3/8 | 14,000 | 24,000 |
| 1/2 | 12,000 | 20,000 |
| 5/8 | 9,000 | 15,000 |

With the INOX cut, PFERD has developed innovative burs for work on stainless steel (INOX). The INOX cut is characterized by an extremely high stock removal rate on all austenitic as well as rust- and acid-resistant steels. It creates significantly less vibration than a comparable cross cut.

Advantages:

- Outstanding stock removal rate and service life due to the innovative tooth geometry.
- Achieves high surface qualities through optimum chip formation.
- Prevents heat discolouration in the material due to the reduced heat generation.

Workpiece materials:

- Stainless steel (INOX)
- Soft titanium alloys (tensile strength < 500 N/mm²)

Performance values for applications on stainless steel (INOX)

- Conventional double cut burs
- Carbide burs, INOX cut

Applications:

- Milling out
- Leveling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Recommendations for use:

- If possible, use the tools on powerful drives with elastically mounted spindles to avoid vibration.
- For the cost-effective use of burs, work with higher rotational/peripheral speeds. Power recommendation for power tools:
 - Shank diameter of 1/8": 75 to 300 watts
 - Shank diameter of 1/4": from 300 watts
- Please observe the rotational speed recommendations.

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

Safety note:

- The very high stock removal rate can cause discolouration on the shank. This does not constitute a safety risk.

PFERDVALUE®:

PFERDERGONOMICS® recommends burs with INOX cut as an innovative bur solution for comfortable working with significantly reduced vibration and less noise.

PFERDEFFICIENCY® recommends burs with INOX cut for long fatigue-free and resource-saving work with perfect results in a very short period of time.

More PFERD products and information on working with stainless steel (INOX) can be found in our PRAXIS brochure "PFERD tools for use on stainless steel (INOX)".

Recommended rotational speed range [RPM]

To determine the recommended rotational speed range [RPM], please proceed as follows:

- 1 Select the material group to be machined.
- 2 Refer to the table for the peripheral speed.
- 3 Select the required bur diameter.
- 4 The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| 1 Material group | | Application | Cut | 2 Peripheral speed |
|------------------------|--------------------------------|--|------|--------------------|
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | INOX | 1,500 - 2,000 SFPM |
| Non-ferrous metals | Non-ferrous metals | Titanium/titanium alloys | INOX | 850 - 1,500 SFPM |

Example:

Carbide bur,
INOX cut,
bur diameter of 1/2".
Coarse stock removal on stainless steel (INOX).
Peripheral speed: 1,500–2,000 SFPM

Rotational speed range:

12,000–16,000 RPM

| 3 Bur dia. [Inches] | 4 Peripheral speeds [SFPM] | | |
|-------------------------|----------------------------|--------|--------|
| | 850 | 1,500 | 2,000 |
| Rotational speeds [RPM] | | | |
| 1/8 | 27,000 | 48,000 | 64,000 |
| 1/4 | 13,000 | 24,000 | 32,000 |
| 3/8 | 8,000 | 14,000 | 19,000 |
| 1/2 | 7,000 | 12,000 | 16,000 |

Carbide burs, high performance line

ALU cut for aluminum/non-ferrous metals

When it comes to machining aluminum and non-ferrous metals, PFERD offers two high-performance cuts and a HICOAT® coating which have been designed specifically for demanding machining tasks on long-chipping and lubricating materials.

Applications:

- Milling out
- Leveling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

Recommendations for use:

- If possible, use the tools on powerful drives with elastically mounted spindles to avoid vibration.
- For the cost-effective use of burs, work with higher rotational/peripheral speeds.
Power recommendation for power tools:
- Shank diameter of 1/8": 75 to 300 watts
- Shank diameter of 1/4": from 500 watts
- Please observe the rotational speed recommendations.

More PFERD tools and a wealth of useful information on working with aluminum can be found in our PRAXIS brochure "PFERD tools for use on aluminum".

ALU cut

The ALU cut is especially designed for stock removal on aluminum. This cut is characterized by its high stock removal rate.

Advantages:

- Extremely high stock removal rate.
- Large chips.
- Reduced material adhesion.
- Long service life and smooth running.
- Can be used with peripheral speeds of up to 3,600 SFPM.

ALU cut with HICOAT® coating HC-NFE

The use of burs with the PFERD HICOAT® coating HC-NFE prevents chips adhering during work on soft aluminum alloys. This increases the service life and improves the surface quality of the workpiece.

Advantages:

- Mainly used for long-chipping and lubricating non-ferrous metals.
- Highest stock removal rate.
- Effective chip removal through improved anti-adhesion characteristics.
- Lower thermal loads.
- Longer service life.

Workpiece materials:

- Aluminum
- Bronze
- Copper
- Brass
- Titanium
- Titanium alloys
- Zinc
- Fibre-reinforcing plastics (GRP/CRP)
- Thermoplastics

PFERDVALUE®:

PFERDEFFICIENCY® recommends burs with HICOAT® coating for long fatigue-free and resource-saving work with perfect results in a very short period of time.

Recommended rotational speed range [RPM]

To determine the recommended peripheral speed range [SFPM], please proceed as follows:

- ① Select the material group to be machined.
- ② Determine the type of application.
- ③ Select the cut.
- ④ Establish the peripheral speed range.

To determine the recommended rotational speed range [RPM], please proceed as follows:

- ⑤ Select the required bur diameter.
- ⑥ The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| ① Material group | | ② Application | | ③ Cut | | ④ Peripheral speed | |
|--------------------|---------------------------|-------------------------|---|----------------------|--------------------|--------------------|--------------------|
| Non-ferrous metals | Soft non-ferrous metals | Aluminum alloys | Coarse stock removal | ALU | 2,000 - 3,600 SFPM | HICOAT® HC-NFE | |
| | | | Fine stock removal | ALU | | | 3,000 - 3,600 SFPM |
| | | Brass, copper, zinc | Coarse stock removal | ALU | 2,000 - 3,600 SFPM | HICOAT® HC-NFE | |
| | | | Fine stock removal | ALU | | | 3,000 - 3,600 SFPM |
| | | Hard non-ferrous metals | Hard aluminum alloys (high Si content) | Coarse stock removal | ALU | 2,000 - 3,600 SFPM | |
| | | | | Fine stock removal | ALU | | 3,000 - 3,600 SFPM |
| | Bronze | | Coarse stock removal | ALU | 2,000 - 3,000 SFPM | HICOAT® HC-NFE | |
| | | | Fine stock removal | ALU | | | 2,000 - 3,600 SFPM |
| | Plastics, other materials | | Thermoplastics, fibre-reinforced plastics (GRP/CRP) | Coarse stock removal | ALU | 2,000 - 3,600 SFPM | |
| | | | | Fine stock removal | ALU | | HICOAT® HC-NFE |

Example:

Carbide bur,
ALU cut,
bur diameter of 1/2".
Coarse stock removal on hard non-ferrous
metals, e.g. bronze.

Peripheral speed: 2,000–3,000 SFPM

Rotational speed range:
16,000–24,000 RPM

| ⑤ Bur dia. [Inches] | ⑥ Peripheral speed [SFPM] | | |
|---------------------------|---------------------------|--------|---------|
| | 2,000 | 3,000 | 3,600 |
| | Rotational speed [RPM] | | |
| 1/8 | 64,000 | 95,000 | 117,000 |
| 1/4 | 32,000 | 48,000 | 59,000 |
| 5/16 | 24,000 | 36,000 | 44,000 |

With the CAST cut, PFERD has developed innovative burs especially for work on cast iron. They are characterized by an extremely high stock removal rate on cast iron and impress through smooth milling with significantly reduced vibration and less noise.

Advantages:

- Up to 100% higher stock removal rate when used on cast iron due to the innovative tooth geometry, when compared with conventional double cut burs.
- Significantly increased aggressiveness, large chips and very good chip removal.
- Comfortable working with reduced vibration and less noise.

Workpiece materials:

- Grey cast iron
- Nodular cast iron
- Annealed cast iron

Applications:

- Milling out
- Leveling
- Deburring
- Cutting out holes
- Surface work
- Work on weld seams

Safety note:

- The very high stock removal rate can cause discolouration on the shank. This does not constitute a safety risk.

PFERDVALUE®:

PFERDERGONOMICS® recommends burs with CAST cut as an innovative bur solution for comfortable working with significantly reduced vibration and less noise.

PFERDEFFICIENCY® recommends burs with CAST cut for long fatigue-free and resource-saving work with perfect results in a very short period of time.

Performance values for applications on cast iron

Recommendations for use:

- If possible, use the tools on powerful drives with elastically mounted spindles to avoid vibration.
- For the cost-effective use of burs, work with higher rotational/peripheral speeds. Power recommendation for power tools: from 300 watts.
- Please observe the rotational speed recommendations.

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

Recommended rotational speed range [RPM]

To determine the recommended rotational speed range [RPM], please proceed as follows:

- 1 Refer to the table for the peripheral speed.
- 2 Select the required bur diameter.
- 3 The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| Material group | | Application | Cut | 1 Peripheral speed |
|----------------|---------------------------------|---|------|--------------------|
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | CAST | 1,500 - 2,500 SFPM |

Example

Carbide bur, CAST cut, bur diameter: 1/2"

Coarse stock removal on cast iron.

Peripheral speed: 1,500–2,500 SFPM

Rotational speed: 12,000–20,000 RPM

| 2 Bur dia. [Inches] | 3 Peripheral speeds [SFPM] | |
|---------------------|----------------------------|--------|
| | 1,500 | 2,500 |
| | Rotational speeds [RPM] | |
| 3/8 | 14,000 | 24,000 |
| 1/2 | 12,000 | 20,000 |

Carbide burs, high performance line

The TOUGH cut has been specially designed for tough operating conditions in shipyards, foundries and steel construction. They are also ideal for use in all manufacturing sectors where, due to the difficult production environment, tooth breakages or other damage to conventional burs is a frequent occurrence.

Advantages:

- Innovative, special cuts providing exceptional impact resistance.
- Minimized tooth chipping/breakage, splintering and bur failures due to very robust, high-performance cuts.
- Can also be used at low rotational speeds.
- Due to their extreme impact resistance, they can be used as long-shank variants.

Applications:

- High-impact applications when using shank extensions
- Applications with a high angle of surface contact
- Milling of narrow contours
- Applications where high rotational speeds are not available

Workpiece materials:

- Cast iron
- Steel
- Cast steel
- The TOUGH cut can be used on materials up to 580 HV (54 HRC). For harder materials, it is recommended to perform trials beforehand.

Recommendations for use:

- For the cost-effective use of burs, work with higher rotational/peripheral speeds.
Power recommendation for power tools:
- Shank diameter of 1/8": 75 to 300 watts
- Shank diameter of 1/4": from 300 watts
- Please observe the rotational speed recommendations.

TOUGH cut

Carbide burs with the TOUGH cut are particularly aggressive and are characterized by high stock removal.

Compatible with:

- Flexible shaft drive
- Straight grinder

Safety note:

Please observe the reduced rotational speeds for extended shank burs. They can be found on page 11.

Recommended rotational speed range [RPM]

To determine the recommended peripheral speed range [SFPM], please proceed as follows:

- 1 Select the material group to be machined.
- 2 Select the cut.
- 3 Establish the peripheral speed range.

To determine the recommended rotational speed range [RPM], please proceed as follows:

- 4 Select the required bur diameter.
- 5 The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| 1 Material group | | | Application | 2 Cut | 3 Peripheral speed |
|-------------------|--|---|---------------------------------------|-------|--------------------|
| Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | Coarse stock removal with impact load | TOUGH | 850 - 2,000 SFPM |
| | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | | TOUGH | 850 - 1,150 SFPM |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | Coarse stock removal with impact load | TOUGH | 850 - 2,000 SFPM |

Example:

Carbide bur,
TOUGH cut,
bur diameter of 1/2".
Coarse stock removal with impact load on steels up to 370 HV.
Peripheral speed: 850–2,000 SFPM
Rotational speed range: 7,000–16,000 RPM

| 4 Bur dia. [Inches] | 5 Peripheral speeds [SFPM] | | |
|---------------------|----------------------------|--------|--------|
| | 850 | 1,150 | 2,000 |
| | Rotational speeds [RPM] | | |
| 3/8 | 8,000 | 11,000 | 19,000 |
| 1/2 | 7,000 | 9,000 | 16,000 |
| 5/8 | 5,000 | 7,000 | 12,000 |

Carbide burs with MICRO cut are specifically designed for finishing and are used in areas in which abrasive mounted points are usually used. They offer a higher stock removal rate and produce a high surface quality, particularly compared with conventionally milled surfaces. They also operate with low vibration and little noise. They maintain their geometry over their entire service life, and are well suited to manual and machine applications. Almost all materials up to a hardness of 940 HV (68 HRC) can be machined.

Advantages:

- High surface quality.
- Unlike with abrasive mounted points, there is no change in geometry due to wear and tear.
- Work on almost all materials up to 940 HV (68 HRC).

Applications:

- Finishing
- Very fine cleaning work
- Corrections in die and mold construction
- Sharpening cutting tools

Workpiece materials:

- Steel and cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron

Recommendations for use:

- If possible, use the tools on powerful drives with elastically mounted spindles to avoid vibration.
- For the cost-effective use of burs, work with higher rotational/peripheral speeds.
Power recommendation for power tools:
- Shank diameter of 1/8": 75 to 300 watts
- Shank diameter of 1/4": from 300 watts
- Please observe the rotational speed recommendations.

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot applications
- CNC machines

PFERDVALUE®:

PFERDERGONOMICS® recommends burs with MICRO cut as an innovative bur solution for comfortable working with significantly reduced vibration and less noise.

PFERDEFFICIENCY® recommends burs with MICRO cut for long fatigue-free and resource-saving work with perfect results in a very short period of time.

Recommended rotational speed range [RPM]

To determine the recommended peripheral speed range [SFPM], please proceed as follows:

- 1 Select the material group to be machined.
- 2 Establish the peripheral speed range.

To determine the recommended rotational speed range [RPM], please proceed as follows:

- 3 Select the required bur diameter.
- 4 The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| 1 Material group | | | Application | Cut | 2 Peripheral speed |
|------------------------|--|---|--------------------|-------|--------------------|
| Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | Fine stock removal | MICRO | 2,000 - 2,500 SFPM |
| | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | | | 1,500 - 2,000 SFPM |
| Stainless steel (INOX) | Rust and acid-resistant steels | Austenitic and ferritic stainless steels | Fine stock removal | MICRO | 1,500 - 2,000 SFPM |
| Non-ferrous metals | Hard non-ferrous metals | Bronze, titanium/titanium alloys, hard aluminum alloys (high Si content) | Fine stock removal | MICRO | 1,500 - 2,000 SFPM |
| | High-temperature-resistant materials | Nickel-based and cobalt-based alloys (engine and turbine construction) | | | |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | Fine stock removal | MICRO | 2,000 - 2,500 SFPM |

Example

Micro bur, MICRO cut, bur diameter: 3/8".
Fine stock removal on steel and cast steel up to 370 HV (38 HRC), e.g. construction steels, carbon steels etc.
Peripheral speed: 2,000–2,500 SFPM
Rotational speed: 19,000–24,000 RPM

| 5 Bur dia. [Inches] | 4 Peripheral speed [SFPM] | | |
|---------------------|---------------------------|--------|---------|
| | 1,500 | 2,000 | 2,500 |
| | Rotational speed [RPM] | | |
| 3/32 | 72,000 | 95,000 | 120,000 |
| 1/8 | 48,000 | 64,000 | 80,000 |
| 1/4 | 24,000 | 32,000 | 40,000 |
| 3/8 | 14,000 | 19,000 | 24,000 |

Carbide burs for work on edges are mainly used in steel and aluminum construction, and have been specifically designed for chamfering, deburring, and rounding of edges. PFERD offers burs for both flexible as well as for defined work on edges, including EDGE ALU designed with ALU cut for work on aluminum.

Workpiece materials:

- Steel and cast steel
- Stainless steel (INOX)
- Non-ferrous metals
- Cast iron
- Plastics, other materials

Compatible with:

- Flexible shaft drive
- Straight grinder
- Robot
- CNC machines

Defined work on edges with the EDGE cut

Carbide burs with the EDGE cut have been specially developed for defined work on edges. The special design allows the bur to run directly along the edges without damaging the workpiece. Exact edge shapes can be created in a single step – with either defined chamfers of 30° or 45°, or to a defined radius of 1/8". Among other things, rounding edges is a precautionary measure for anti-corrosion protection according to ISO 12944-3, ISO 8501-3, SOLAS XII/6.3 (Ref. T4/3.01 MSC.1/Circ.1198).

Advantages:

- Special design for precise guidance.
- Safe and comfortable to guide.
- Create exact edge shapes in a single step.

Applications:

- Defined work on edges
- Defined deburring
- Breaking and rounding edges in steel and aluminum construction
- Rounding edges in preparation for the application of anti-corrosion coatings in ship-building, on crane systems and other steel constructions which are exposed to corrosion loading
- Defined chamfering for weld seam preparation for V-shaped seams (60°, ISO 9692-1)
- Defined chamfering for edge breaking (45°)

Recommendations for use:

- Use the burs counterrotationally. In order to produce a fine surface, pass the bur over the edges in the rotational direction.
- If possible, use EDGE cut burs with the PFERD pneumatic straight grinder PG 3/210 (EDP 90036) with matching guide sleeve EFH PG 3/210 (EDP 95294) (see the info box on the right).

PFERDVALUE®:

PFERDEFFICIENCY® recommends burs with EDGE cut for long fatigue-free and resource-saving work with perfect results in a very short period of time.

EDGE Cutting System (ECS)

The EDGE Cutting System consists of burs with the EDGE cut and a special guide sleeve that can be mounted into a conventional power tool collet to ensure optimal guidance during light deburring work (see pages 71–72).

Advantages:

- Improved guidance.
- Can be used with any conventional straight grinder.
- Bur is interchangeable.

Compressed-air straight grinder PG 3/210 DH and accessories

The combination of this compressed-air straight grinder, the specially designed guide sleeve for this power tool and burs with the EDGE cut, guarantees optimal guidance for creating exact edge shapes.

Advantages:

- Improved guidance due to additional contact surface.
- Exhaust is discharged towards the front, so that the thermal load on the workpiece and the bur is reduced (this is a key advantage when working with materials which do not conduct heat well, such as stainless steel (INOX)).
- Avoids the build-up of chip deposits when working on aluminum materials.
- Chips are removed in a targeted way by the power tool's exhaust air.

Carbide burs, high performance line

Carbide burs for work on edges

Recommended rotational speed range [RPM]

To determine the recommended peripheral speed range [SFPM], please proceed as follows:

- ① Select the material group to be machined.
- ② Select the cut.
- ③ Establish the peripheral speed range.

To determine the recommended rotational speed range [RPM], please proceed as follows:

- ④ Select the required bur diameter.
- ⑤ The peripheral speed range and the bur diameter determine the recommended rotational speed range.

| ① Material group | | Application | ② Cut | ③ Peripheral speed |
|--------------------------------------|--|---|------------------|--------------------|
| Steel, cast steel | Steels up to 370 HV (38 HRC) | Construction steels, carbon steels, tool steels, non-alloyed steels, case-hardened steels, cast steel, alloyed steels | EDGE | 2,000 - 3,000 SFPM |
| | Hardened, heat-treated steels over 370 HV (38 HRC) | Tool steels, tempering steels, alloyed steels, cast steel | | 2,000 - 2,500 SFPM |
| Non-ferrous metals | Soft non-ferrous metals | Soft aluminum alloys | EDGE ALU | 3,000 - 3,600 SFPM |
| | | Brass, copper, zinc | EDGE | 2,000 - 3,000 SFPM |
| | Hard non-ferrous metals | Bronze, hard aluminum alloys (high Si content) | EDGE ALU | 3,000 - 3,600 SFPM |
| | | Titanium/titanium alloys | EDGE | 850 - 1,500 SFPM |
| High-temperature-resistant materials | Nickel-based and cobalt-based alloys (engine and turbine construction) | EDGE | 850 - 1,500 SFPM | |
| Cast iron | Grey cast iron, white cast iron | Cast iron with flake graphite, with nodular graphite cast iron, white annealed cast iron, black cast iron | EDGE | 2,000 - 3,000 SFPM |
| Plastics, other materials | Fibre-reinforced plastics (GRP/CRP), thermoplastics | | EDGE ALU | 2,500 - 3,600 SFPM |

Example:

Carbide bur,
EDGE cut,
bur diameter of 5/8".
Steel and cast steel up to 370 HV (38 HRC),
e.g. construction steels, carbon steels etc.
Peripheral speed: 2,000 - 3,000 SFPM

Rotational speed range:

12,000 - 18,000 RPM

| ④ Bur dia. [Inches] | ⑤ Peripheral speeds [SFPM] | | | | | |
|---------------------|----------------------------|-------|--------|--------|--------|--------|
| | 850 | 1,500 | 2,000 | 2,500 | 3,000 | 3,600 |
| | Rotational speeds [RPM] | | | | | |
| 5/8 | 5,000 | 9,000 | 12,000 | 15,000 | 18,000 | 22,000 |

Cone counterbore EDGE 30°

Cone counterbore bur for the production of precisely defined chamfers. Suitable for counterboring and chamfering of defined 30° chamfer angles.

PFERDVALUE®:

Evaluation bur sets

5-piece carbide bur set – Multi-material

Contains five carbide burs in different cuts in the most common shapes and dimensions, uniquely designed for various materials including steel, stainless steel, aluminum and cast iron.

The sturdy plastic box protects the burs from dirt and damage. Five additional unused slots are available for other burs.

EDP 26557

5 piece carbide bur set 1/4" shank (plastic case)

Contains 5 pcs. burs with 1/4" shank diameter.

Bi-metal hole saws

General information

Hole saws are made from tough, shatter-proof, sturdy HSS bi-metal. The saw teeth are made from high-quality M42 material.

Advantages:

- Cost-effective sawing of round cut-outs.
- Chattering during sawing is prevented by the alternating tooth pitch.
- High concentricity.
- Good chip removal.
- The hole saw is conveniently centred and guided via the replaceable bi-metal pilot drill.
- Hole saw arbor is supplied with an ejection spring for improved ejection of the sawn cut material.

Workpiece materials:

- Steel
- Stainless steel (INOX)
- Aluminum
- Copper, bronze, brass
- Plastics
- Wood

Applications:

- Cutting out holes

Recommendations for use:

- Observe the recommended rotational speed.
 - Clamp the pilot drill in the hole saw arbor and make sure that it projects at least 1/8" over the teeth of the hole saw.
 - When cutting metals, use a high-quality cutting oil, if possible. This facilitates smooth running and lengthens the hole saw service life.
- Exception:** When working on aluminum, use kerosene instead of cutting oil.
- Bi-metal hole saws are suitable for work on stainless steel (INOX). In order to avoid corrosion, remove any particles which develop during work from the workpiece. Clean the workpiece chemically or mechanically (etching/polishing, etc.).
 - Make sure that all the teeth are applied evenly. To prevent tooth breakage, avoid swinging movements during sawing.
 - Avoid overheating the saw.

Compatible with:

- Power drill
- Drill press

Safety notes:

- When using shank extensions, the recommended hole saw rotational speed must not be exceeded. Risk of accidents!

= Wear eye protection!

= Follow the safety instructions!

Bi-metal hole saws

Hole saws made from tough, shatter-proof, sturdy HSS bi-metal for cutting out holes.

Thread:

LS 14–LS 30 = 1/2–20
 LS 32–LS 152 = 5/8–18

Ordering notes:

- Please refer to the table below for the maximum cutting depth.
- Please order hole saw arbors separately. Detailed information and ordering data on hole saw arbors can be found on page 78.

Bi-metal hole saw sets

13-piece hole saw set

The set contains nine bi-metal hole saws in the most common diameters, including accessories, for engineers in the construction, container and pipeline industries. It is supplied in a clearly structured plastic box which protects against dirt and damage. The operating instructions are included. It is possible to use the 1-3/8" and 1-1/2" diameter hole saws with the adapter and washer.

Industry/ target group:

Process equipment construction, tank and pressure vessel construction, pipeline construction

Quick-mounting system for hole saws, adapter sets

PFERD offers a clamping system for easily and quickly using bi-metal hole saws. The quick-mounting system and the two three-part adapter sets, which have been tailored to the hole saw diameter, enable PFERD bi-metal hole saws to be used easily and conveniently on all conventional power drills.

Advantages:

- Easily and quickly swap different hole saws.
- After the application is completed, the hole saw and quick-mounting system can be separated without the use of additional tools by simply pressing a button.
- Interchangeable bi-metal pilot drill.

Ordering notes:

- Adapter set EDP 29043 is available for hole saw diameter 9/16" - 1-3/16", and adapter set EDP 29044 for hole saw diameter 1-1/4" - 6". Both adapter sets contain three adapters with the same dimensions.

Recommendations for use:

- Screw the adapters quickly and easily into the desired hole saw and clamp them in the quick-mounting system.

| For hole saw threads | Suitable for hole saw diameters [Inches] | d ₂ [Inches] | Shank type | Description | EDP number | |
|----------------------|--|-------------------------|------------|-------------------------------------|------------|---|
| - | 9/16 - 6 | 7-1/16 | hexagonal | Quick-mounting system for hole saws | 29042 | 1 |
| 1/2-20 | 9/16 - 1-3/16 | - | - | 3-piece quick-mounting adapter set | 29043 | 1 |
| 5/8-18 | 1-1/4 - 6 | - | - | 3-piece quick-mounting adapter set | 29044 | 1 |

Example combination

Bi-metal pilot drill

Bi-metal pilot drills for bi-metal hole saw arbors and quick-mounting systems for hole saws.

Ordering notes:

- Hole saw arbors EDP 29033 and EDP 29034 are supplied with the bi-metal pilot drill EDP 29040.
- The bi-metal pilot drill EDP 29039 can be used for the quick-mounting system EDP 29042.

| Shank dia. [Inches] | Shank dia. [mm] | Shank type | d ₂ [Inches] | Suitable for hole saw diameters [Inches] | Suitable for arbors | EDP number | |
|---------------------|-----------------|------------|-------------------------|--|----------------------|------------|---|
| 1/4 | 6.35 | Round | 1/4 | 9/16 to 6 | EDP 29033, EDP 29034 | 29040 | 1 |
| | 6.35 | Round | 1/4 | 9/16 to 6 | EDP 29036 | 29039 | 1 |

Bi-metal hole saws

Accessories

Hole saw arbors

Hole saw arbors are designed for mounting the hole saw and the pilot drill.

Purpose of the ejection spring

It prevents the sawn-out material from becoming jammed between the inner walls of the hole saw and the drill. The spring force ejects the material. Should this effect not be required for a particular application, e.g. pipes that are already installed, the spring can easily be removed manually without the help of tools.

Ordering notes:

- Available in three sizes.
- Select the appropriate arbor, taking into account the hole saw diameter and available power tool.
- Hole saw arbors EDP 29033 and EDP 29034 are supplied with the bi-metal pilot drill EDP 29040 and an ejection spring.
- Hole saw arbors EDP 29036 are supplied with the bi-metal pilot drill EDP 29039 and an ejection spring.

| d_2 [Inches] | d_2 [mm] | Thread | Shank type | Suitable for hole saw diameters [Inches] | EDP number |  |
|-------------------|---------------|---------|------------|--|------------|---|
| 3/8 | 9.53 | 1/2"-20 | hexagonal | 9/16 to 1-3/16 | 29033 | 1 |
| | 9.53 | 5/8"-18 | hexagonal | 1-1/4 to 6 | 29034 | 1 |
| 1/4 | 6.35 | 1/2"-20 | round | 9/16 to 1-3/16 | 29036 | 1 |

Shank shapes

The adjacent tables provide information on the arbor shapes and dimensions for the hole saw arbors and pilot drills. The matching hole saws and hole saw arbors are indicated.

Shank dimensions [mm]

| PFERD hole saw arbor EDP | Shank dia. [Inches] | Shank dia. [mm] | Shank shape | for PFERD hole saw dia. [Inches] |
|--------------------------|---------------------|-----------------|---|----------------------------------|
| 29033 | 3/8 | 9.53 |  | 9/16 to 1-3/16 |
| 29034 | 3/8 | 9.53 |  | 1-1/4 to 6 |
| 29036 | 1/4 | 6.35 |  | 9/16 to 1-3/16 |

| PFERD pilot drill EDP | Shank dia. [Inches] | Shank dia. [mm] | Shank shape | For PFERD hole saw arbors |
|-----------------------|---------------------|-----------------|---|---------------------------|
| 29040 | 1/4 | 6.35 |  | EDP 29033, EDP 29034 |
| 29039 | 1/4 | 6.35 |  | EDP 29036 |

Ejection spring

All hole saw arbors are delivered with an ejection spring for better ejection of the sawn cut material.

Before using the hole saw, this ejection spring can be installed/removed without additional tools if required. Screw the ejection spring onto the drill from the side with the smaller diameter up to its limit. It is also possible to use the ejection spring with the adapter and washer (see diagram).

Arbor extension for hole saws

The bi-metal hole saw arbors EDP 29033 and EDP 29034 can be extended using this arbor extension.

Advantages:

- Suitable for work on hard-to-reach components.
- Particularly suitable for work on hollow walls.
- Deep holes can be accessed easily.
- Achieves the required distance between the power tool and the work area.
- Avoids damage to the workpiece and machine.
- Dust is not drawn into the power tool during sawing.

| Hexagon socket d_1 [Inches] | Hexagon socket d_1 [mm] | l_1 [Inches] | l_1 [mm] | Shank type | Width across flats (AF) d_2 [Inches] | Width across flats (AF) d_2 [mm] | Suitable for arbors | EDP number |  |
|-------------------------------------|---------------------------------|-------------------|---------------|------------|--|--|---------------------|------------|---|
| 3/8 | 9.53 | 12 | 300 | hexagonal | 7/16 | 11 | EDP 29033, 29034 | 29071 | 1 |

Repair set for hole saw arbors

With the repair set for hole saw arbors, the most common parts can be replaced in case of loss or damage.

Contents:

- 2 ejection springs
- 2 hexagon socket head screws
- 1 hexagon socket wrench

| EDP number |  |
|------------|--|
| 29072 | 1 |

LSA adapter

1-1/4" to 1-1/2" diameter hole saws can be used with the adapter, a washer and the hole saw arbors EDP 29033 and EDP 29036.

| Suitable for hole saw diameters [Inches] | Suitable for arbors | EDP number |  |
|---|----------------------|------------|---|
| 1-1/4 – 1-1/2 | EDP 29033, EDP 29036 | 29070 | 1 |
