WHEELER

47100	
DIMENSIONS:	28" (70cm) L x 17" (42.5cm) W x 35" (87.5 cm) H
WEIGHT:	96 lbs. 44 kg
PUMP:	Triplex Piston: Positive Displacement
	Inlet and outlet ports: 3/8" NPT
	Capacity: 2.2gpm, 7.6lpm
	Pressure: 1000psi (68 bar) max
	Operating Speed: 3450rpm Operating Temp.: 160 degree F max
	Lubrication: Continuous oil bath, 11.83oz Special Cat Pump Oil
	Shaft Size: 5/8" diameter
MOTOR:	11/2hp, 115/220V Electric 60hz
CONTROL:	Adjustable pressure relieve valve
GAUGE:	Glycerin filled, 0 – 2000psi (136 bar)
DISCHARGE HOSE:	1/2" x 10' (3m), rated 2000psi (136 bar) working pressure
INLET HOSE:	3/4 " x 10' (3m) with strainer

Pressure Feed (or Gravity Feed) Method: (Preferred Methods)

- 1. Fill the water line (or test vessel) to be tested prior to pump connection.
- 2. Connect water supply hose to the garden hose inlet connection (G) on the pump.
- 3. Open valve and turn supply water on.
- 4. Purge the pump and pressure hose of all air.
- 5. Connect output (pressure) hose between pump output connection (I) and water line (or vessel) being tested.
- 6. Turn pump on.
- 7. Purge water line (or vessel) of all air at the highest point of the system.
- 8. Bring water line (or vessel) to pressure. Watch the gauge (A) while pumping. When the desired pressure is achieved, turn the isolation valve (B) to the "off" position. The engine can now be turned off. If pressure drops, there is a leak in the line.

Siphon Method

Use a clean water source

- 1. Fill the water line to be tested.
- 2. Fill the intake hose (WR PN #34550) with water, then quickly place the hose into a bucket and turn pump on. (The unit is self-priming once primed.) Continue to pump until you see the water coming out of the outlet, with little or no air mixed with it.
- 3. Connect the output hose to the water line. Continue on with steps 6 through 8 in pressure feed method.

Pre-Setting Your Pump

Your pump can be pre-set to a specific pressure easily by adjusting the pressure relief valve.

- 1. Unscrew (counterclockwise direction) pressure relief valve knob (C) a few turns. Be sure not to unscrew valve knob all the way as internal parts can be easily lost.
- 2. Add a ball valve (not supplied with pump) to the end of the high pressure hose.
- 3. Follow steps 2 through 4 from the 'Pressure Feed Method'.
- 4. As water is flowing out of the high pressure hose, turn the ball valve to the "off" position.
- 5. Slowly start turning pressure relief valve knob (C) (in the clockwise direction) by ¼ turn increments, until you reach the desired pressure. Maximum pressure is 1000psi or 2000psi depending on the model. Tighten jam nut (B) to lock pressure relief knob in place.
- 6. Your test pump is now pre-set. This eliminates over-pressurizing the water line (or the vessel).

Troubleshooting Your Pump

Test pressure not being reached:

- Possible air in line (or vessel)
 - Air needs to be purged from system.
 - Remove pump from system and follow steps 1 thru 6 of the "Pre-Setting Your Pump" section.
 - If using the Siphon Method and not getting pressure, try the 'Pressure Feed' or 'Gravity Feed Method' to ensure water is getting into the pump.
 - Check strainer (H) O-Ring for cracks.
 - Check inlet quick disconnect (G) O-Ring for cracks
- Pressure relief valve not adjusted properly.
 - Turn relief valve counterclockwise and watch for change in pressure.

Pump Maintenance

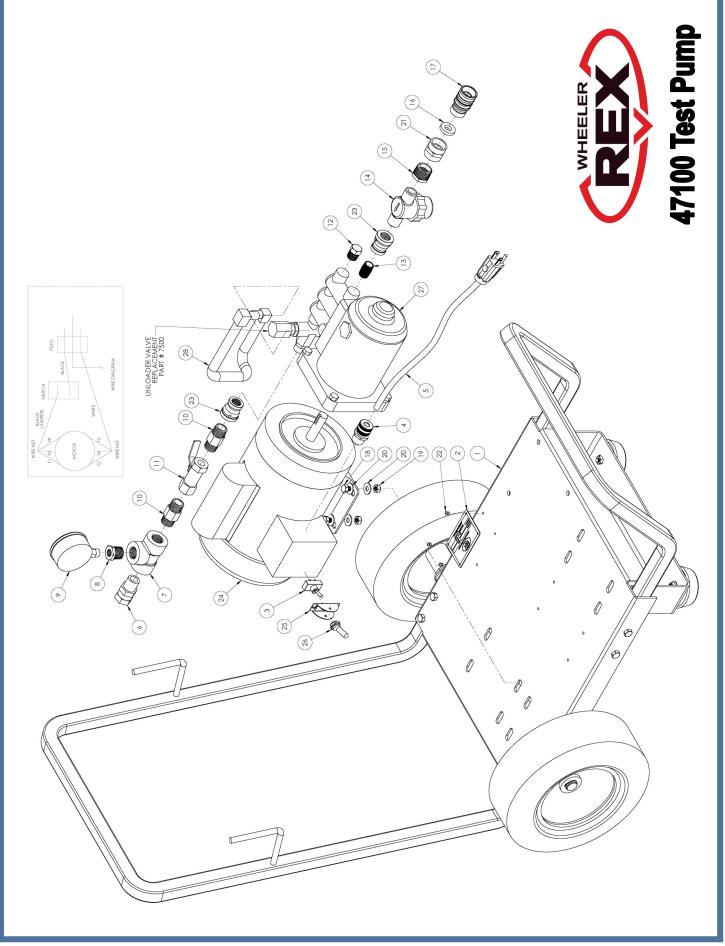

- Pump 50/50 antifreeze/water solution through pump after each use to lubricate internal parts of pump and to avoid freezing in cold weather.
- Check strainer O-Ring (H) for cracks prior to each use.
- Check oil level through oil sight glass (F) located on front of pump prior to each use. CAT recommends changing oil after 50 hours of break-in operation. Change oil every 3 (three) months or after 500 hours of use. Pump requires CAT pump crankcase oil (21oz container), Wheeler Rex PN 276254. Add oil through pump crankcase cap (E).
- Suction Hose Wheeler Rex PN 34550

CAUTION !!! This pump is designed for water only!!

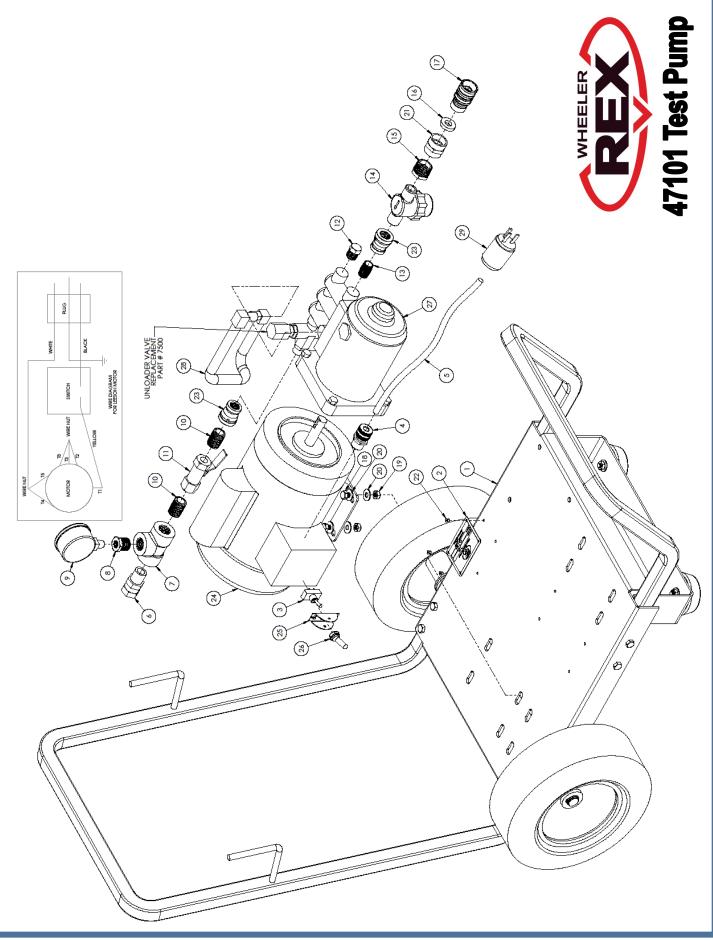

The pump is equipped with an adjustable pressure relief valve (C), which helps protect the system from being over pressurized. It can be preset by plugging the end of the hose. Turn the adjusting knob clockwise to increase pressure and counterclockwise to decrease.
